

Model 738E - Party of 8

Seating Capacity	6-8
Dimensions (w × l × h)	2260 × 2260 × 970mm
Weight Dry / Filled	341 / 1848kg
Waterports™	33
Jet Range	41 - 114cm

Base:

We recommend that the hot tub sits on a concrete base which is flat and level. We would also recommend that provisions are made for the step unit which is not included in the overall dimensions of the tub. Our standard Protec step unit measures 630 x 1090mm.

Electrics:

We strongly advise that all electrical works are carried out by a qualified electrician. We can supply diagrams of electrical requirements on request. We recommend that a suitably sized dedicated cable is run from the main board where there will be a 32 mA Rcd and 32 Amp Mcb. The cable will run to a point further than two metres (or out of reach) of the hot tub and wired into a 32 Amp isolator. We will continue wiring from this point.

Delivery:

We can transport hot tubs to their desired final position provided the access is safe and clear. We would recommend a site survey (which is free of charge). Special arrangements can be made if the access is restricted.
